

**Preliminary Amendment to claims prior to examination  
application number 10/709,976**

**Filing date 06/10/2004**

**First named inventor Aaron Robert Lema**

**Examiner name Phi A**

**No new matter has been included in this change**

**Cancel all previous claims 1,2,3,4,5,6,7**

**What is claimed and I desire to secure by Letters Patent is:**

**8. A system to be utilized by the housing industry that has multiple height, width, depth, placement and style options for components of a home to increase accessibility throughout the home, and defines those options available by incorporating visually distinctive and readily identifiable indicia placed on components and features of a home and on a check off list.**

**A: Components of a home**

- a. Components are all items attached to wall members, wall surfaces, support members, joist, roof truss and foundations of a home.**

**B: Features of a home**

- a. Features are all wall members, wall surfaces, support members, joist, roof truss and foundations.**

**C: Visually distinctive and readily identifiable indicia**

- a. Indicia are defined as discriminating marks, colored markings, option cards, brochures, pictures and alpha-numeric and numeric designations.**

**D: Check Off List**

- a. Check off list is defined as a document used by the housing industry and the public/buyer that contains indicia which corresponds with indicia placed on components of the home.**

**9. The indicia are used to determine placement, height, width, depth and style of the components of the home.**

**10. The indicia are used by the housing industry to communicate options available.**

**11. The indicia are used by the public/buyer to select options.**

**12. The check off list is used to communicate to the housing industry options selected by the buyer/public.**
